In this tutorial, I want to give an introduction to the concept of „Triangulation“ and to discuss its specific potentials in the context of the „Mixed Methods“ developments. After a short overview of the concept, its history, forms and applications, I want to work with the participants on examples of using several methodologies in a study. These examples will come from my own research but also from the participants’ studies and questions. In this tutorial, „Mixed Methods“ and „Triangulation“ will be understood more broadly and refer to combinations of qualitative and quantitative research as well as to combinations of several qualitative approaches in one study. Participants are welcome to bring their own material and examples to the tutorial and to get in touch with me before, if they want to do so.
